

Sales Analytics

An in-depth analysis of sales transactions, customer behavior, product performance, and store operations — powered by an interactive Excel Dashboard.

About the Dataset

What's Inside

The dataset covers sales transactions, customers, products, discounts, and store locations — enabling analysis across four key dimensions.

Product Performance

Customer Analysis

Sales Team Performance

Store Analysis

Dashboard Overview — Key Metrics

₹24.7M

Gross Sales

Total gross sale amount across all products

₹22.3M

Total Sales

Net sales after discounts applied

9.96%

Avg Discount

Average discount percentage across transactions

₹2.37M

Discount Amount

Total value of discounts given

The dashboard features five panels: **Overview**, **Product Performance**, **Store Analysis**, **Sales Team Performance**, and **Customer Analysis** — with filters for Month, Category, Location, and more.

Overview

Business Insight:

Laptop generated the highest gross sales amount, while Smartwatch contributed the lowest sales among all products.

Business Impact:

The company should focus more on high-performing products like laptops to maximize revenue and improve marketing strategies for low-selling products.

Business Insight:

Laptops generated the highest total sales, while Smartwatches recorded the lowest sales among all product categories.

Business Impact:

Focusing on high-demand products like laptops and improving sales strategies for low-performing products can enhance overall revenue growth and market performance.

Product Performance

Business Insight:

The Electronics category generated the highest total sales amount, while the Clothing category contributed the lowest sales among all product categories.

Business Impact:

Prioritizing high-performing categories like Electronics and improving marketing strategies for low-performing categories can help increase overall sales and profitability.

Business Insight:

Smartphones recorded the highest quantity sold, while Iron had the lowest sales among the top products.

Business Impact:

Focusing on high-demand products like Smartphones and improving promotions for low-selling products can help increase overall sales and business growth.

Sales Team Performance

Business Insight:

Varun and Nidhi generated the highest total sales among all sales representatives, while Meena recorded the lowest sales performance. Overall, the sales distribution among representatives remained relatively close, showing balanced team performance.

Business Impact:

Identifying top-performing sales representatives can help the business understand successful sales strategies, improve team training, and increase overall revenue performance. Monitoring lower-performing representatives also helps management provide targeted support and performance improvement plans.

Business Insight:

Varun sold the highest quantity of products, while Deepak and Meena recorded the lowest quantity sold among all sales representatives.

Business Impact:

Analyzing product quantity sold by representatives helps the business measure sales productivity, improve inventory planning, and identify opportunities to enhance overall sales performance

Store Analysis

Business Insight: Hyderabad generated the highest total sales amount, while Chennai recorded the lowest sales among all store locations.

Business Impact: Identifying high-performing locations can help the business focus on successful sales strategies, while improving operations and marketing in low-performing cities can increase overall revenue growth.

Business Insight: Hyderabad recorded the highest quantity sold, while Mumbai had the lowest sales quantity among all store locations.

Business Impact: Understanding sales performance by location helps the business optimize inventory distribution, improve regional marketing strategies, and increase overall sales efficiency.

Customer Analysis

Business Insight:

Kavya Nair and Arjun Mehta generated the highest total sales among the top customers, while Vikram Joshi recorded the lowest sales within the top 10 customer group.

Business Impact:

Identifying high-value customers helps the business strengthen customer relationships, improve retention strategies, and focus on personalized marketing to drive long-term revenue growth

Business Insight:

Arjun Mehta recorded the highest average order value, while Simran Kaur had the lowest average order value among the top 10 customers.

Business Impact:

Analyzing average order value helps the business identify high-spending customers, improve premium sales strategies, and increase overall revenue through targeted upselling and personalized offers.

Key Business Insights

1 Products

Laptops & Smartphones dominate revenue; Smartwatches underperform. Electronics leads all categories.

2 Sales Team

Varun & Nidhi are top performers. Team distribution is balanced — replicate top strategies across reps.

3 Stores

Hyderabad leads in sales & volume. Chennai & Mumbai need stronger marketing and operational support.

4 Customers

Arjun Mehta recorded the highest average order value, while Simran Kaur had the lowest average order value among the top 10 customers.

Aditya Roy received the highest average discount percentage, while Ananya Das received the lowest average discount among the top 10 customers.

Business Recommendations

Promote Best-Sellers

Increase marketing for Laptops & Smartphones; improve Smartwatch visibility with targeted offers.

Train Sales Team

Coach lower-performing reps using Varun & Nidhi's successful strategies to lift team output.

Scale Winning Stores

Apply Hyderabad's playbook to Chennai & Mumbai; adjust discount strategies by city.

Customer Retention

Offer personalized deals to high-value customers; launch loyalty programs to reduce heavy discounting.

Inventory Planning

Maintain adequate stock of high-demand products to prevent shortages and lost sales.

Data-Driven Decisions

Use sales data regularly to guide strategy, improve performance, and optimize profitability.

Conclusion

This project leveraged **Pivot Tables** and an **Excel Dashboard** to transform raw sales data into actionable insights across products, customers, sales teams, and store locations.
